Who we are

Fred Adam
expert in Locative Media

Verónica Perales
expert in Transmedia

Horacio González
expert in GIS coding

and...

Xoán Xil López, Enrique Tomás , Ryan Chapman from motive.io, Garlos García from thecoder.es, Jo Langton, Arianna Mazzeo and Mauricio O'Brien with others collaborators...

*"We don't make apps or maps, we create Experiences
to listen and feel space & time with our body and our mind."*

What really matters in a few words

Everyone of us have a deep and unique practice in New Media Art. In the last decade we have created a very large number of projects and experiments around geolocation and storytelling. A few years ago we decided to go beyond our network of Art centers and apply our research in the fields of cultural institutions, museums and Earth Science projects. We have had the great pleasure to conceive innovative concepts for artists, scientists and cultural agents. We made great discoveries during this period. We discovered how to build Walking Audio Books to walk in time with the steps. We also discovered how to create liquid digital environments to empower people in creating locative stories with our open framework Cgeomap. We have also found how to create 3D locative sound compositions and conceptualize new ways to navigate with our ears. With the Soundwalk Art Collective we laid the Amazon rainforest on top of Times Square.

Our clients & supporters, a BIG thanks to...

Projects

Jungle-ized - NY - Augmented reality soundscape.

As part of the Times Square Arts' At the Crossroads program, which includes installations and performances in the public plazas of Times Square, visitors will be invited to take self-guided audio tours of the Amazon by downloading the JUNGLE-IZED mobile app.

Deep Time Walk - Devon - Walking Audio Book.

The Deep Time Walk app enables anyone to experience a walking audio history of Earth's roughly 4.6 billion year big history anywhere. As you walk across 4.6km of deep time, with each meter representing 1 million years, you witness clumping, boiling, crashing, wrecking, cracking...

Projects

Cosmosis1 - NY - Augmented reality documentary.

The Cosmosis1 App provides a new lived-experience of science... an epiphany, really. By making abstract science real, it suggests the hidden world that's just behind the scenes. This app shows you what your eyes keep you from seeing.

Sonic Dinosauria - Paris - locative audio game & map.

Sonic Dinosauria is a augmented soundscape game combined with a paper map. We are mixing a Jurassic treasure hunt with a paleontology course for kids. We use the software Notours for the creation of the locative sounds.
